**100% MECHANICAL SOLUTION**

SLIDES

EN

# GREAT ADVANTAGES

## FULLY MECHANICAL SYSTEM

**Provides an alternative to other complex and hazardous mechanisms that are normally used like hydraulic or gas cylinders, which often create logistical challenges in mold storage.**

## UNMATCHED MOVEMENT CAPABILITY

**Both for straight and angled applications. Ideal for parts with undercuts that are difficult or impossible to demold from the core side of the mold.**

## NEW SYSTEM ADAPTABLE TO ANY SLIDE

**Enjoy total freedom of movement in slides, designed by the client or pre-existing ones, transforming challenging applications into easy ones!**

## SIMPLIFIED INSTALLATION AND SIZING

**Set-up and housings are simple and quick to do. Plus, it comes in a universal size, which can be adapted to fit almost any custom mold design.**

# ADAPTABLE CONCEPT TO ANY KIND OF SLIDE!

## 3 DIFFERENT COMPONENTS IN 3 DIFFERENT PARTS

Cavity Components

Core Components

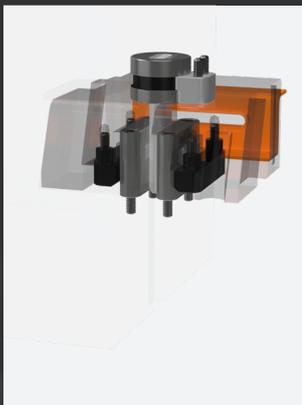

Slide Components

## HOW DOES IT WORK?

Mold Closed

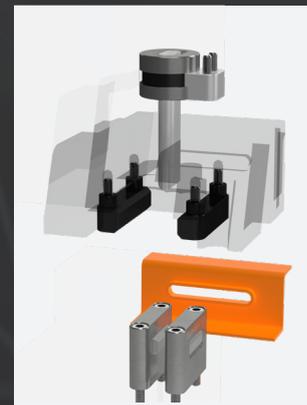

Molten plastic is injected into the mold, filling the cavity and taking its shape. Once the part is solidified and the mold is ready to open, the magic can begin.

1st movement

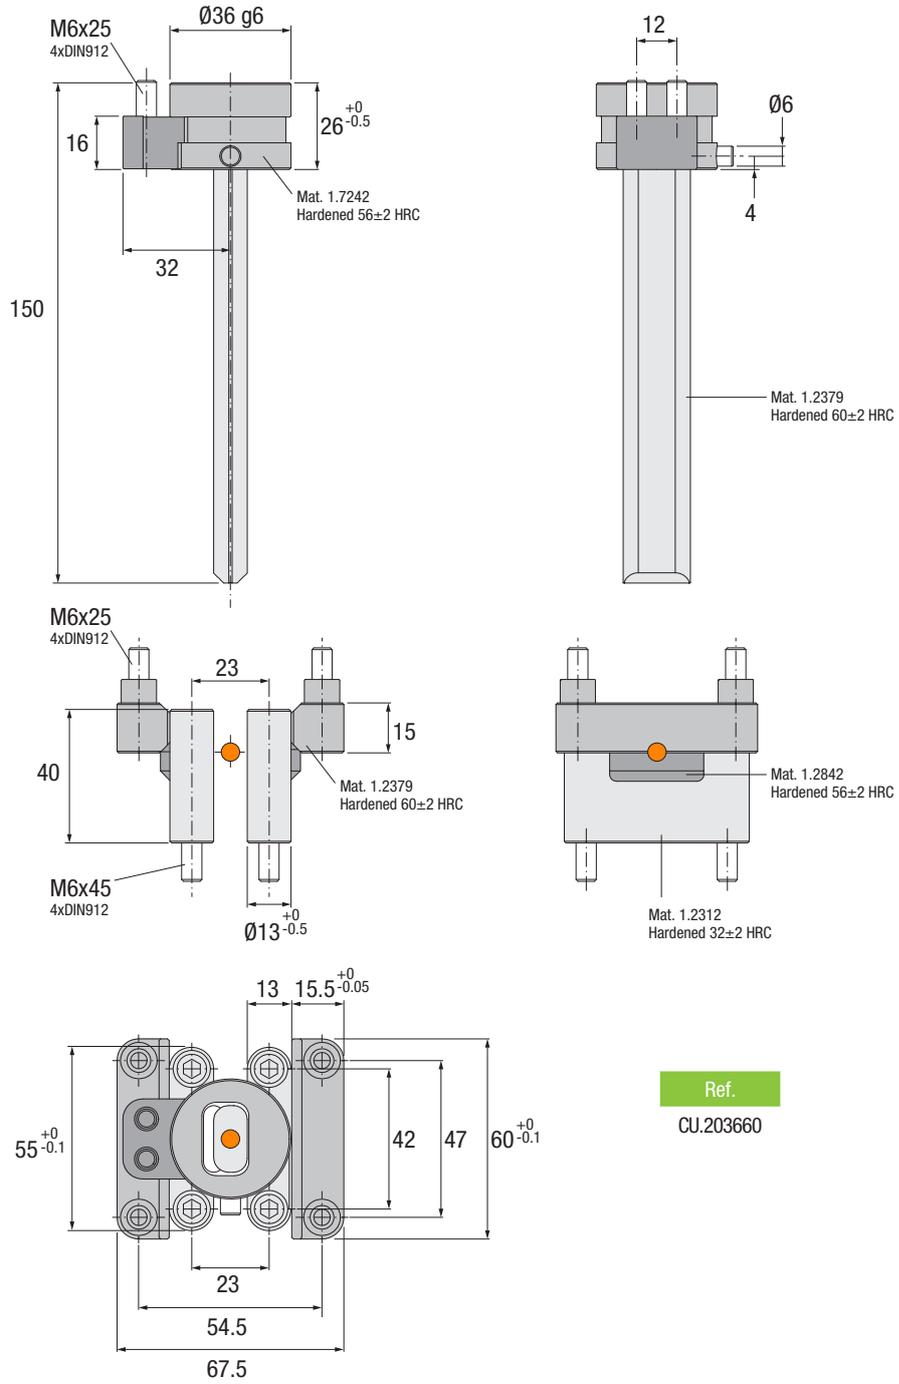

The slide shifts into its final position and stays open, releasing the undercut with precision.

2nd movement

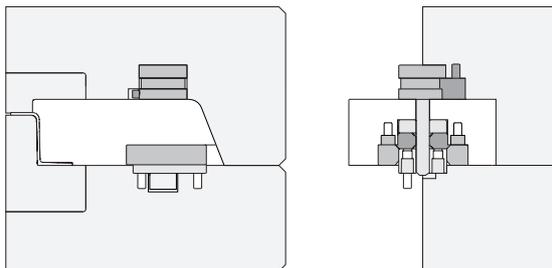

The mold continues to open, allowing the ejectors to release the plastic part. Once ejection is complete, the mold closes and the cycle starts again.
